

COMISKEY PARK CHICAGO, ILLINOIS

comiskey park

COMISKEY PARK

OWNER Illinois Sports Facilities Authority | LOCATION Chicago, IL | FACILITY TYPE Baseball stadium

PROJECT BACKGROUND

Old Comiskey Park, located on the south side of Chicago, served as the home for the Chicago White Sox from 1910–1990. In 1989, the construction of the new Comiskey Park began directly across the street and was completed in 1991. By 2000, the Illinois Sports Facilities Authority decided to enhance the new park to be more fan-friendly by adding more seats, bringing seating closer to the field, updating the club levels, and establishing a large patio area in the outfield section. The project was completed in two separate phases without disturbing any of the existing structures. For Brandenburg's performance on this project, they were awarded the Outstanding Performance Award from Turner Construction Company, Chicago Territory.

SCOPE OF WORK

Removed precast walls and two rows of seats along first base and third base lines from the dugouts to the outfield wall

Saw cut support beams and removed the precast concrete walls and five rows of seats along the outfield

Removed and reconfigured the bull pen areas located beyond the outfield wall

Removed all structures including walls, columns, and seating in center field to allow for construction of the patio section

Removed the Club level concrete topping slab leaving the existing precast slab below
